<https://lesscss.org/usage/>

What is CSS clearfix, how is it used, and why is it helpful?

CSS clearfix is a fix/hack used to fix issues with floating elements. It is helpful in keeping things clean looking and inside containers. Adding clearfix to a class and using the code in css will apply the fix.

What are SaSS and LESS?

SaSS and LESS are both CSS preprocessors. They allow the use of variables that can store info for use throughout the styling files. This allows for a more readable and less repetitive stylesheet.

What is a highlight of what you have learned this week?

The highlight for me was learning how to make a page look more pleasant. I also liked learning a bit about CSS preprocessors and am excited to make use of them as I get better.
